

Observatorio Tecnológico HP en la Universidad de Extremadura

Creación de un Ecosistema de Negocio de Cloud Computing.

Mérida 15-11-2010

Juan Miguel Trejo Fernández
Account Support Engineer. Technology Support Engineer.
Hewlett Packard Española.

Contenido

Asuntos a tratar en esta presentación

1 Observatorio Tecnológico HP-UEX

2 Visión Cloud- Computing HP

3 Presentación Ecosistema

4 Preguntas.

Observatorio Tecnológico HP-UEX

- Se firma en Octubre 2009
- Vincula a HP y la Universidad de Extremadura
- Proyectos Fin de Carrera
- Cotutorizados por Hp y la UEX
- Últimas tecnologías en el mercado
- Primera promoción Cloud Computing.

Pero que es el Cloud computing
...!!! ????????

Lo que todo el mundo quiere ???????

El invento de unos pocos.. ??????

Cloud Definition - *US Federal Government*

Definición

- Cloud Computing es un modelo de pago por uso para proporcionar acceso bajo demanda por la red a un pool compartido de recursos de computación configurables (redes, servidores, almacenamiento, aplicaciones y servicios) que pueden ser rápidamente provisionados y entregados con un mínimo esfuerzo de gestión o interacción con el proveedor de servicios.

Características claves

- On-demand self-service
- Ubiquitous network access
- Resource pooling
 - Location independence
 - Homogeneity / multi-tenant
- Rapid elasticity
- Measured service

Why are people interested?

- **Cost** – Less requirement to buy servers, storage and IT support skills
- **Time to market** – The ability to try a new solution immediately and understand it's benefits
- **New value** – Access to new capabilities
- **New insight** – Able to profile mass audiences
- **Reach** – Access to new mass markets

What are the risks?

Service levels – Can the service provider meet the business needs for network and application availability?

Workloads – Are they suitable for Cloud?

Complexity – Difficult to manage for a Cloud provider?

Network Latency – Affects end-end service experience

Lock-in – How easy is it to migrate from one provider to the next?

Regulations – Where does the data reside?

Security – Who will have access?

Financial stability – How stable is the provider?

Cloud Computing Characteristics: business

- **Elastic and scalable:** Consumers can quickly provision and deprovision IT services; Cloud service appears infinitely scalable to the consumer.
- **Self-service:** Consumers have the ability to use cloud services as the need arises; Self-service increases IT agility to match the pace of business.
- **Consumption-based pricing model:** Vendors charge customers based on amount of the service consumed. Customers pay for only the IT services they use, thereby increasing IT ROI.
- **Shared infrastructure:** Vendors leverage the infrastructure to service multiple consumers; Multi-tenancy is vital to driving down infrastructure costs.
- **Virtualized and dynamic:** Virtualization creates a dynamic environment for quick resource provisioning and better resource management.

*Burton 2009 Cloud Computing - Transforming IT

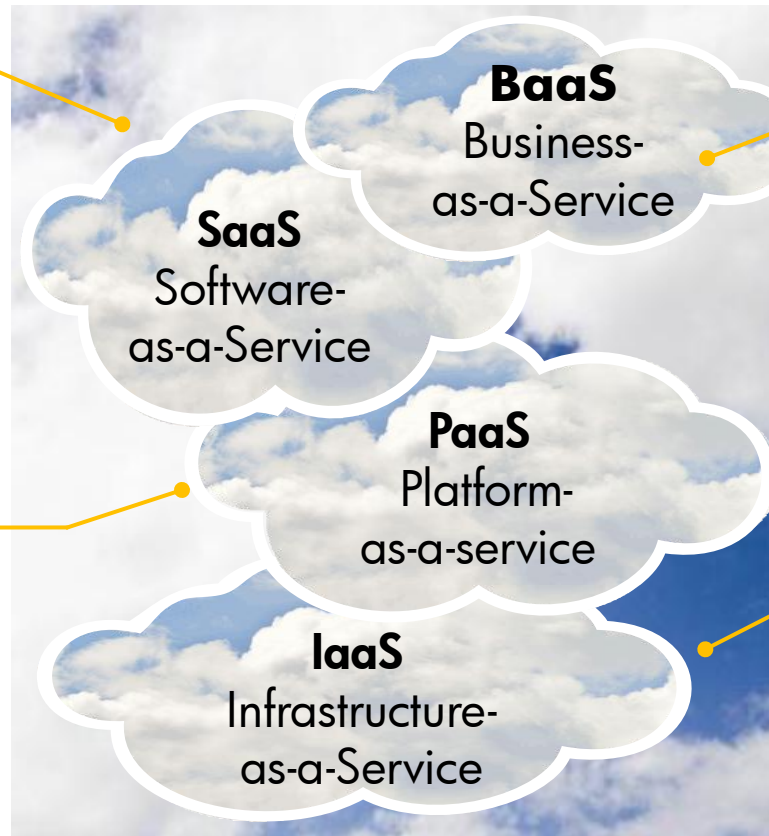

How the cloud is being adopted today

Shared applications

- Taleo
- Salesforce.com
- Netsuite
- SuccessFactors

Programmable or accessible resources

- Force.com
- Google App Engine
- Microsoft Azure

Cloud Business Services

- Food Traceability
- Lab-Pharma
- HP Printing Services (MagCloud, SnapFish, others)

Commodity (industrialized) computing resources

- Amazon S3 & EC²
- AT&T Synaptic Hosting
- Rackspace Mosso/Cloud Hosting

Enterprises are looking to the cloud for global-class services and innovative ways to reduce technology costs and drive business agility and a new generation of cloud services are emerging for business innovation

Las infraestructuras tradicionales

Se construyen servidor a servidor

Hacia una infraestructura integrada

Aprovisionamiento cuando se necesita

La unidad de negocio demanda la aplicación

Se verifican los recursos necesarios (portal self-service)

Selección de la plantilla de infraestructura de la aplicación-

Herramientas para determinar los recursos disponibles

Pulsar el botón de "go"

Se lanza automáticamente el Workflow

Ya tenemos una aplicación de infraestructura funcionando

- Menos gente involucrada
- Unos cuantos pasos automatizados
- Información integrada
- Mismas funcionalidades para servidores físicos o virtuales – sin limitaciones!

Who controls the compute environment?

Source: Burton Group

Matrix / Cloud: Pero que es eso?

- Una Oferta integrada de Hardware Software y Servicios..!!!!

Insight Software

Capacity Planning
Orchestration
Disaster Recovery*

Optional Kit:
StorageWorks
EVA

Como puedo
acceder a un
Cloud
Computing
propio ??
Como el de
Trujillo.

HP Insight Software
Continuously control and optimize HP platforms

Virtual Connect
virtualized
LAN and SAN
connections

Integrity and
ProLiant
blade servers

Software de
Virtualización
Windows 2008 +
Hyper V

BladeSystem
Matrix

Habilita la rápida implementación y soporte de
soluciones de servicios integrados.

* HP Insight Recovery is for ProLiant. HP-UX customers have the option to purchase Serviceguard and MetroCluster or buy HP BladeSystem Matrix with HP Insight Recovery.

**Other storage options supported, such as iSCSI for VM data stores, and any FC-compliant SAN solution

IaaS conceptual model

CLOUD PORTAL

Self-service portal / Activation

Service catalog purchase and activation through authorized workflow

CLOUD ACCOUNTING

Mediation

Usage and rating of cloud resources

CLOUD

MANAGEMENT

Business Dashboard
SLA Mgmt

CLOUD PROVISIONING

Orchestration

Service logical modelling, service catalog creation, service provision and retirement

Service Monitoring

CLOUD RESOURCES

Dynamics

Logical server and resources needed templates, single vision

Virtualization

Pure (Virtual servers) / Hybrid (logical servers)

Infrastructure elements

Compute (Blade matrix/SCI), Storage (FC/iSCSI), Networking

Resource Mgmt

MUCHAS GRACIAS !!
